Abstract (en)

[origin: WO2020002097A2] The disclosure relates to a display device for a programming apparatus for an implant, wherein the display device comprises a frame (7), which receives and holds the following components: a display module (6) configured to generate and display a representation, a shielding layer (4) arranged on the display module (6), a planar capacitive touch sensor (2) arranged on the shielding layer (4), and a cover (1) arranged on the touch sensor (2). The display device further comprises an antenna (9), wherein the antenna (9) is configured to transmit and/or to receive in the MICS frequency band. A programming apparatus for an implant is furthermore disclosed.
