Abstract (en)

[origin: WO2020002542A2] The invention relates to a carrying device (2) for receiving pipeline elements (4) in a surface coating installation, comprising a main body (6) and a coupling section (28) formed on the main body (6) for coupling the carrying device (2) having a ceiling-side conveying mechanism, and a plurality of extension arms (8) extending laterally from the main body (6). The extension is characterized in that on each extension arm (8), a receptacle (10) having support feet (12, 12'), which are arranged in pairs and are spaced apart from one another, are arranged. The support feet (12, 12') are designed to come into contact with an outer wall section of a pipeline element (14), respectively, in order to hold the pipeline element (4) between the support feet (12, 12').
