Abstract (en)

[origin: WO2020002041A1] The invention relates to a connection device (100) for connecting an outlet opening (210) of a downpipe (200) to an upward-facing inlet opening (310) of a container (300), comprising a body (110) with a continuous opening (120) from an upper side (112) to an underside (114) of the body (110), wherein the body (110) is designed in such a way that it is suitable to be connected by its upper side (112) to the outlet opening (210) of the downpipe (200) via a flexible connection element (400), in particular via a compensator, in such a way that a connection is created between the outlet opening (210) of the downpipe and the opening (120) of the body (110). The connection device (100) also comprises a coupling device (130) which is attached to the underside (114) of the body (110) and which is suitable for creating a sealed connection between the opening (120) of the body (110) and the inlet opening (310) of the container (300) when the body (110) rests on an upper side (302) of the container (300).
