Abstract (en)

[origin: WO2020002610A1] The invention is directed to a machine tool W having a control device for controlling the operating modes of the machine tool W. The control device comprises an operating unit B for operation of the control device by a user and a safety controller S for actuating the various machine areas M of the machine tool W. By means of the operating unit B, it is possible to select machine areas of the machine tool W and to define an operating mode for the selected machine areas M. The selected machine areas M and associated operating mode are transmitted to the safety controller S. As a result of this type of actuation of the machine tool, safe operation is possible during installation and service work on the machine tool.
