Abstract (en)  
[origin: WO2020002828A1] The present invention provides a pole wheel (31) for a rotor of a rotating electrical machine, comprising a plate (32) which extends transversely in relation to a rotation axis (X) of the pole wheel and a plurality of pick-ups (33) which extend from the plate in a substantially axial direction. The plate (32) has at least one recess (39) for receiving and cooperating with an attachment element (51) in order to attach a fan (25, 26) to the pole wheel (31).
