Abstract (en)
A machine (1) for inspection and maintenance of trains and trams, comprising a first load-bearing structure (2a) formed by at least one elevated guiding element (3a) and by at least one supporting post (7a) associated with the elevated guiding element (3a) by means of a first slider coupling (8a); the elevated guiding element (3a) can be installed in a room designed to accommodate a train or tram (4) to be inspected and/or to be maintained at a raised height with respect to the floor (5) so as to have an orientation that is substantially parallel to the longitudinal extension of the tracks (6) that are present in the room and on which the train or tram (4) is to be placed and the first slider coupling has the degree of translational freedom that lies on a directrix that is oriented substantially parallel to the tracks (6).
