Abstract (en)
[origin: WO2020007411A1] The invention relates to a chair comprising a chair base (1) on which a seat and a backrest connected to the seat via a synchronizing mechanism are movably mounted, wherein a spring (4), that presses against the seat when the chair is in the base position and an abutment (5) which is rotatably mounted on the chair base (1), are provided. The abutment (5) is formed on the one hand with a connecting element (7) connected to a front edge of the seat and on the other with one end of the spring (4). According to the invention, the connecting element (7) cooperating with the abutment (5) is guided in a longitudinal guide (8) and is arranged in the base position of the seat in a highest position of the longitudinal guide (8).
