Abstract (en)
[origin: WO2020052781A1] The invention relates to a storage device (1) comprising at least one storage container (2) provided with a container housing (15) which has a housing lower part (24) and a housing cover (25) swivellably mounted on the housing lower part (24) in the region of the rear side (7). On the underside of its two lateral cover edge sections (57), the housing cover (25) has a respective centring strip (63) projecting downwards, wherein these centring strips (63) protrude into the housing lower part (24) when closing the housing cover (25) in such a way that, via transverse support occurring relative to the housing lower part (24), they ensure that the housing cover (24) is guided into a closed position that is centred relative to the housing lower part (25).
