Abstract (en)

[origin: WO2020052783A1] The invention relates to a storage device (1), which comprises at least one storage container (2), which has a container housing (15), on the outside of which at least one handle (52) is arranged, which is designed as a D handle having two handle legs (55) connected to one another by a connecting web (56). The handle (55) can be pivoted about a pivot axis (51) between a non-use position (52a) pivoted against the container housing (15) and a use position protruding away from the container housing (15). Two pivot bearing devices (65) are provided for the pivot mounting, each pivot bearing device having two bearing elements (85, 86) inserted one in the other. A securing device (91) is associated with each handle leg (55), which securing device supports the handle leg (55) at least in such a way that the bearing elements (85, 86) remain mutually engaged during the use of the handle (52) in the use position.
