Abstract (en)

[origin: WO2020007816A1] The invention relates to a method for producing a polyurethane dispersion, having the steps of: I) providing isocyanate-functional prepolymers A) in a liquid phase comprising a solvent which can be mixed with water and which has a lower boiling point than water and II) adding NCO-reactive compounds to the isocyanate-functional prepolymers from step I) such that a reaction with the prepolymers is at least partly produced; wherein the liquid phase in step I additionally comprises water and/or after step II), water is added to the mixture obtained in step II). A pressure p_l is applied to the liquid mixture with the isocyanate-functional prepolymers A) prior to and/or while carrying out step II), wherein p_l is less than the local atmospheric pressure present at said point in time. The pressure p_l is selected such that in step II), ≤ 50 mass.% (preferably > 0 mass.% to ≤ 40 mass.%, more preferably ≥ 0.1 mass.% to ≤ 30 mass.%, in particular ≥ 1 mass.% to ≤ 10 mass.%) of the originally provided solvent which can be mixed with water is distilled.
