Abstract (en)

[origin: WO2020008009A1] The present invention relates to a method for detecting and differentiating point mutations in microorganisms, in particular a bacterium, comprising a step of amplifying one or more DNA targets, preceded, or not, by a step of inverse transcription of one or more RNA, and followed by a step of detecting, by oligochromatography, amplified products and differentiating (or discriminating) point mutations (mutations by substitution, insertion or deletion of nucleic bases).
