Abstract (en)
[origin: WO2020008155A1] Support device designed to be installed on public roads, comprising a support post, characterised in that said post has a cross-section comprising a first and a second branch, the support device further comprising: - a first intermediate element which is separate from said post and designed to be secured thereto and - a first element for covering said post, which is designed to be fastened between said first and second branches, said first intermediate element and covering element being provided with a complementary first attachment element and a complementary second attachment element, respectively, in order to secure said first covering element to said post, the first and second attachment elements being arranged so that said first covering element, when it is secured to said post, conceals said first intermediate element. Support device comprising a post, for example, for supporting tramway catenaries.
