Abstract (en)  
[origin: WO2020007402A1] The invention relates to a lock for a motor vehicle, in particular a side door lock, comprising a locking mechanism having a rotary latch and at least one locking pawl, an actuating lever chain with at least one actuating lever (3) and a release lever, wherein a blocked locking mechanism can be unblocked by means of the release lever, and a coupling element between the actuating lever and the release lever, wherein the coupling element can be actuated by means of a mass inertia element (5) which is mounted in the motor vehicle lock (1), and wherein the mass inertia element (5) can be stored in the motor vehicle lock (1) by means of a plastic mandrel (4).
