Abstract (en)

[origin: WO2020007577A1] The invention relates to a method for operating a class A medical device (10) together with a class B medical device (12), wherein the medical devices (10, 12) are joined to one another for communication, wherein the class A medical device (10) comprises a display (14) suitable for displaying texts in various languages and wherein the class B medical device (12) has no text display facility, wherein the class B medical device (12), in order to display textual or at least partially textual information (20), sends a data message (22) containing an information identifier (44) to the class A medical device (10) and wherein the class A medical device (10), on receipt of an information identifier (44), loads information (20) matching the information identifier (44) from a medical device database (26) and displays said information by means of its own display (14) for the class B medical device (12).
