Abstract (en)
A burner assembly for burning pulverised fuel is provided with: a primary duct (2) extending along a longitudinal axis (A) wherein a flow of air and pulverised fuel flows in one advancing direction (D); the primary duct (2) being provided with an inlet (7) and an outlet (8); a secondary duct (3) wherein a flow of secondary air flows; the secondary duct (3) being arranged around the primary duct (2) at the outlet (8); and a stabiliser device (28) arranged at the outlet (8) of the primary duct (2) and comprising an annular element (55) centred on the longitudinal axis (A); the stabiliser device (28) being provided externally with at least a plurality of cooling fins (59), which face the secondary duct (3).
