Abstract (en)

A burner assembly for burning pulverised fuel is provided with a primary duct (2) extending along a longitudinal axis (A) wherein a flow of air and pulverised fuel flows in one direction (D); the primary duct (2) having one inlet (7) and one outlet (8); and with an inlet assembly (6) connected to the inlet (7) of the primary duct (2) and supplied, in use, with air and pulverised fuel; the inlet assembly (6) being provided with at least one inclined portion (13) configured to deflect the flow of air and fuel in such a way that the flow itself has a velocity component opposite to the direction (D); wherein the inclined portion is defined by a first wall (16) with a first outer lateral surface (17) facing the primary duct (2) and a second wall (18) with a second outer lateral surface (19) not facing the primary duct (2); wherein at least the first wall (16) deflects the flow of air and pulverised fuel.
