Abstract (en)

[origin: WO2020011933A1] The invention relates to a sterile container unit (1) for receiving items which are sterilised or are to be sterilised, comprising a container tray (2) and a container lid (3), which can be coupled to the container tray (2) by a closure element (4) that can be actuated by means of a pivoting movement (21, 22), and comprising an information carrier (5) which can be preferably interlockingly fastened to the container tray (2) and is set up to display information regarding the content of the sterile container unit (1), wherein the container tray (2), the closure element (4) and the information carrier (5) are adapted to one another such that, following the pivoting movement (21, 22) of the closure element (4), the information carrier (5) is rigidly fixed/locked on the container tray (2).
