Abstract (en)

[origin: WO2020011721A1] The invention relates to a floor structure for a vehicle, the vehicle having at least one subfloor and at least two side walls opposite each other, the floor structure having at least one floor plate and at least one floor covering, which lies on the floor plate, the floor plate being fastened to at least one floor support element. In order to enable a tolerance compensation of a flooring plate in a vertical direction by simple means, the assembly of the floor structure being simplified, a pre-assembled unit is formed at least by the floor plate together with the floor support element and the pre-assembled unit lies on the subfloor and on at least one compensating device for compensating tolerances, which is fastened to at least one side wall, the compensating device being adjustable in a vertical direction and having only two arms, which are arranged at a right angle to one another and are provided only for compensating tolerances.
