Abstract (en)

[origin: WO2020011877A1] The invention relates to a holding device (10) for pipe distributors (1), pipes, or tubular elements for releasably fixing to walls, floors, or ceilings of buildings, preferably within an assembly box (20) or other fittings in the region of pipeline systems, comprising at least one base support (2) in the form of a support element or wall section, on which the pipe distributor (1) is to be fixed and which is provided with multiple holding positions (3) for a specified location for the pipe distributor (1). At least one holder (4) is provided which at least partly surrounds the pipe distributor (1), said holder being designed for releasably attaching to the holding positions (3) of the base support (2), wherein the holder (4) has a holding region (5), which is offset on the main support (2) asymmetrically with respect to the holding positions (3), for receiving the pipe distributor (1).
