Abstract (en)

[origin: US2021147119A1] A packaging for food includes a container to accommodate a food substance. An identifying element is disposed around the container that identifies the food substance. A functional element is associated with the container to remove the food substance from the container. The identifying element is indirectly and detachably connected to the container via the functional element. Upon removal of the functional element from the container, the identifying element is also removed from the container.
