Abstract (en)

[origin: WO2020015845A1] The invention relates to a rose (1) for a sanitary fitting comprising: a housing (2) having at least one supply-flow channel (3) and a plurality of discharge-flow channels (4.1, 4.2, 4.3),; at least one actuation element (5) which can be actuated by a user,; a control element (6) that can be moved in the housing (2) by the at least one actuation element (5) in an actuation plane (7), and; a plurality of valves (8.1, 8.2, 8.3) by means of which the plurality of discharge-flow channels (4.1, 4.2, 4.3) can be closed, wherein each valve (8.1, 8.2, 8.3) of the plurality of valves (8.1, 8.2, 8.3) has a valve body (9.1, 9.2, 9.3), wherein the valve bodies (9) of the plurality of valves (8.1, 8.2, 8.3) can be adjusted by the control element (6) parallel to the actuation plane (7) of the control element (6) from a closed position (10) into an open position (11), wherein the valve bodies (9.1, 9.2, 9.3) of the plurality of valves (8.1, 8.2, 8.3) are coupled to the control element (6) in such a way that an adjustment of a valve body (9.1, 9.2, 9.3) by the control element (6) in the direction of the open position (11) enables a closing movement of at least one other valve body (9.1, 9.2, 9.3) in the direction of the closed position (10), and that the control element (6) constantly adjusts at least one valve body (9.1, 9.2, 9.3) at least partially in the direction of the open position (11).
