Abstract (en)
[origin: WO2020016194A1] The invention provides a benefit agent delivery particle having a core-shell structure in which a porous shell of polymeric material entraps a core containing the benefit agent; in which the pores in the shell are at least partially occluded by a wash-removable coating provided at the exterior surface of the shell; and characterized in that the wash-removable coating is formed from deposited particles of a complex of a cationic surfactant and an anionic surfactant. The invention also provides a laundry treatment composition comprising a benefit agent delivery particle as defined above.
