Abstract (en)

[origin: WO2020016526A1] The invention relates to a method implemented by computer for the creation in a collaborative manner and in a real-time unified process, of animation contents, characterized in that it comprises on the one hand steps of producing and disseminating animation contents as synthesis images intended to be implemented by virtue of the combined action of a plurality of terminals and of a central server, and on the other hand steps of managing these animation contents, said steps being adapted to allow the central server to centralize and manage the set of data produced at the stage of the production steps.
