Abstract (en)

[origin: JP2021079090A] To provide a feeding device that feeds a material capable of being fed through feed piping to equipment capable of traveling on a travel surface. SOLUTION: A feeding device 1 also has a plug that comprises at least one plug electric contact point component capable of being connected to a plug storage part of equipment capable of traveling by linear joint movement, which is extended toward a free end of the plug along the axis of the plug 4. A feed holding part 6 holds a nozzle and the plug in positions and directions, which are defined in a mutually relative manner, so that the nozzle can be connected to an intake bracket when the plug is connected to the plug storage part.
