Abstract (en)  
A method for elevation of equally sized building elements (2) from an even buildingplane (8) is provided, where an array of individual prongs (4), arranged spaced equidistantly apart, side by side and each comprising a front edge (6), are pressured simultaneously in a direction along the buildingplane (8), between the buildingplane (8) and the building elements (2). Preferably, studs (10) projecting upwards from the buildingplane (8) or studs projecting from the building elements (2) and into the buildingplane (8) enter spaces (12) between the prongs (4) during the progression thereof along the buildingplane (8). A tool (28) which is adapted to be used in the method is also provided.
