Abstract (en)

[origin: CN112824745A] A hand tool provided with a lighting means is known from the prior art for working with a corresponding hand tool even in the case of poor visibility. For this purpose, the hand tool is equipped with diffusive light sources in different positions, in particular on the handle or the head, the light sources are intended to illuminate the surroundings. However, it is not possible to specifically illuminate the workpiece during the knocking, even to assist the orientation of the hand tool. On this basis, the invention proposes to project a shaped light trace which illuminates the workpiece throughout the knocking movement. According to the scheme, at least one lighting element is arranged, and the lighting element is connected with the hand tool and can project shaped light tracks.
