Abstract (en)
[origin: EP3825775A1] A processing cartridge (B10, C10) in the technical field of imaging devices. The processing cartridge includes a first force receiving element (A110, B110, C110, D110, 120, 220, 320), contactable with the first force applying element (9201). The first force receiving element has a plurality of position states including a first position state and a second position state. When being in the first position state, the first force receiving element protrudes relative to the first housing (A101, B101, D101, 101, 1101). When being in the second position state, the first force receiving element is closer to the first housing compared with the first position state. The processing cartridge further includes a first elastic element (A140, S1), configured to maintain the first force receiving element in the first position state. The processing cartridge can avoid the problem that the processing cartridge is stuck in an electronic image forming device due to that the first force receiving element protrudes accidentally.
