Abstract (en)

Disclosed is a smoke detector system (400, 600) comprising: a computer (404), and a group of smoke detectors (402, 402', 402''), and a personal mobile computing device (200, 200', 200''). The personal mobile computing device is configured to connect to the computer via a wireless internet connection (414, 414', 414'') and comprises a first wireless communication module (208). The group of smoke detectors that comprise a second wireless communication module (112). The group of smoke detectors are configured for performing a self-test. The group of smoke detectors are configured for acquiring self-test data (124, 124', 124'') measured during the self-test. The personal mobile computing device is configured for directly forming a wireless communication channel (412, 412', 412'') with the group of smoke detectors. The personal mobile computing device is configured for requesting the self-test (122) from the group of smoke detectors via the wireless communication channel. The personal mobile computing device is configured for receiving the self-test data from the group of smoke detectors via the wireless communication channel in response to requesting the self-test. The personal mobile computing device is configured for sending the self-test data to the computer via the wireless internet connection.
