Abstract (en)

[origin: WO2020020955A2] There is described a control module for a modular aerosol generating device for generating an inhalable aerosol. The control module is arranged so that a user can configure the aerosol generating device by selectively connecting to the control module different configurations of modules of a first module type and a second module type. The modules of the first module type contain an e-liquid for generating an aerosol and the modules of the second module type contain a material and comprise a heater that can be activated to heat the material. The configurations comprise: a first single module configuration comprising a module of the first module type, a second single module configuration comprising a module of the second module type, and at least one multi module configuration comprising at least two modules selected from modules of the first and second module types connected together in a stacked arrangement.
