Abstract (en)
[origin: WO2020020862A1] The invention relates to a cleaning machine, comprising at least one cleaning roller (46), a roller housing (14) having a roller receptacle (42) for the at least one cleaning roller (46), wherein the at least one cleaning roller (46) is exchangeably positioned on the roller housing (14) and the roller receptacle (42) has an opening (54) to the outside, a cover (64) for closing the opening (54), and a locking device (115) for fixing the cover on the roller housing (14). At least one convex holding body (86, 90) is arranged on the roller housing (14). A pivotable bracket (69) is arranged on the cover (64), and on the pivotable bracket (69), at least one receptacle (84, 88) for the at least one holding body (86, 90) is arranged. In a release position (118) of the pivotable bracket (69), the at least one holding body (86) can be immersed into the associated receptacle (84) and/or can emerge from the associated receptacle (84). In a locking position (114) of the pivotable bracket (69), an emergence of the holding body (86) from the associated receptacle (84) is blocked.
