Abstract (en)
[origin: WO2020021100A1] A method of detecting security threats comprises: in an enrichment stage, receiving events pertaining to a monitored private network; enriching the events by augmenting them with enrichment data; and receiving, at an analysis engine, the enriched events and analysing the enriched events to detect security threat conditions indicated by the enriched events; wherein at least one of the events is enriched based on external reconnaissance by: determining a related public network address on a network interface between the private network and a public network, and augmenting the event with external reconnaissance data, as determined by transmitting at least one reconnaissance message from an external reconnaissance device on the public network to the related public network address on the network interface between the public and the private networks.
