Abstract (en)
[origin: CN112824066A] The invention relates to a utility knife, comprising a housing (11) and a blade holder (13) that is movable between a rear position and a cutting position in the housing (11), the utility knife comprising a return device (34), which can load the blade holder (13) into the rear position relative to the housing. The special feature is that the return device (34) is mounted on the housing (11) or the blade holder (13) and comprises a spring (35), wherein the return device (34) comprises a movable element which is connected to one end of the spring and is urged in a travel direction by this one end of the spring, and the movable element interacts with the blade holder (13) and the housing (11) and the blade holder (13) is urged into the rear position in at least one region of movement of the blade holder (13) .
