Abstract (en)

[origin: CN112850604A] The invention relates to a device (1) for closing a container (18) with a screw closure (17), preferably for closing a beverage container in a beverage filling facility. The device includes a closure accommodating part (2) for accommodating a spiral closure (17), a driving element (3) for providing torque around the axis of rotation (4), and a magnetic clutch (5) for rotationally coupling the driving element (3) and the closure accommodating part (2). Another clutch (7) is provided between a driven element (6) provided on the driven side of the magnetic clutch (5) with respect to the driving element (3) and the closing accommodating part (2). Disclosed is a closed device (100) provided with the device (1).
