Abstract (en)
[origin: WO2020025812A1] The invention relates to a method for fighting a fire event. According to the invention, the following method steps are proposed: detecting a fire event (200) by means of a detection unit (210), starting a first extinguishing phase for fighting the fire event (200), wherein in the first extinguishing phase an extinguishing means having a first extinguishing action property is discharged by means of at least one discharge device (310), monitoring of the fire event (200) by means of the detection unit (210) and detecting fire event parameters and determining a location (PL) of at least one still remaining source of fire (202) and starting a second extinguishing phase as a function of the detected fire event parameters, wherein in the second extinguishing phase an extinguishing means having a second extinguishing action property is discharged to the location (PL) and/or the surroundings thereof in a demand-controlled manner, wherein the second extinguishing action property is different from the first extinguishing action property. The invention further relates to a system (500) for carrying out the method according to the invention and to a control device (220).
