Abstract (en)

[origin: WO2020020531A1] The invention relates to a handheld machine tool, in particular an impact driver, having a drive train (20) for driving a tool receptacle (90), provided for receiving a tool (19), in particular a screwdriver tool, about a rotation axis (D), wherein the drive train (20) comprises a drive motor (21), an output shaft element (80), on which the tool receptacle (90) is arranged, and a drive shaft (48), which is drivable by the drive motor (21), for driving the output shaft element (80), wherein the output shaft element (80) is rotatably mounted by means of an output pivot bearing (83) and the drive shaft (48) is rotatably mounted by means of a drive pivot bearing (50) about the rotation axis (D) in respect of a machine housing (11), and wherein the output shaft element (80) is rotatably mounted by means of a shaft bearing arrangement (49) on the drive shaft (48) about the rotation axis (D). According to the invention, the shaft bearing arrangement (49) has at least two shaft bearings (49A, 49B), which are arranged adjacent to each other in relation to the rotation axis (D) and differ by at least one mechanical property.
