Abstract (en)  
[origin: WO2020025875A1] The invention relates to a radiant panel (2) intended to be installed in a vehicle, in particular a motor vehicle, the radiant panel (2) comprising at least one network (39) of electrodes defining at least one pair of electrodes (39) comprising a first electrode and a second electrode forming, therebetween, a dipole having a resistance (R), which panel allows the heating power of the radiant panel to be adjusted: - by modulating the electrical voltage applied to the radiant panel, - or by adapting an equivalent resistance by modifying the network of electrodes or the resistive layer (31) of the radiant panel.
