Abstract (en)  
[origin: WO2020023984A1] The invention relates to a cardboard crate having a shell (2), which in the area of the shell edges, by height forms stacking attachments (12) protruding over the shell (2), and between the stacking attachments (12) forms reinforced upper longitudinal edge portions in the form of inwardly folded edge flaps (14), which are bent back against the shell (2) by two groove lines (15, 16) while forming a base-parallel support web (17), and are adhesively bonded to the shell (2) by a bent-back flap portion (18). The aim of the invention is to provide beneficial construction conditions. This aim is achieved, according to the invention, in that the creasing line (15) between the shell (2) and the support web (17) has a lower height than the groove line (16) between the support web (17) and the bent-back flap portion (18) glued to the shell (2).
