Abstract (en)

[origin: WO2020025801A1] The invention relates to antibodies or an antigen-binding fragment thereof, wherein the antibody or the antigen-fragment binds to an antigen of the bacterium *Candidatus Savagella* and (i) inhibits the adhesion of the bacterium to intestinal epithelial cells, preferably human intestinal epithelial cells, and/or (ii) depletes the bacterium. The invention additionally provides a medicament comprising the antibody according to the invention or an antigen-binding fragment thereof or comprising an antibody which is produced using the method according to the invention. The invention additionally relates to a kit comprising an antibody according to the invention or an antigen-binding fragment thereof for reducing the Th17 cell proliferation, Th17 cell differentiation, or Th17 cell activity and/or inhibiting the formation of antibodies against endogenous antigens by means of B cells. The kit according to the invention optionally contains an antibiotic. The invention additionally relates to a method for producing an antibody according to the invention, having the steps of: a) immunizing chickens using an immunogenic peptide from an antigen of the bacterium *Candidatus Savagella*; and b) obtaining and purifying the antibodies formed in the chickens or in an egg laid by said chickens. The invention finally relates to a method for producing a medicament according to the invention, having the steps of: a) producing an antibody according to the invention or an anti-binding fragment thereof; and b) formulating the antibody or an antigen-binding fragment thereof as a medicament.
