Abstract (en)
[origin: WO2020025074A2] The invention relates to a paving composed of a plurality of individual paving stones with irregularly curved lateral faces. The individual paving stones have, on their irregularly curved lateral faces, chains or partial chains of adjoining, spaced apart strip-shaped connection sections that mesh together in the manner of a gear rack with connection sections of adjoining paving stones. This makes it possible to achieve paving connections even with randomly shaped paving stones.
