Abstract (en)

[origin: WO2020025171A1] The invention relates to a luminous module (2), in particular for a motor vehicle, comprising: a light source (4) able to emit light rays; a collector (6) with a reflective surface (6.2) configured to collect and to reflect the light rays emitted by the light source (4) into a light beam along an optical axis (8) of the module; and an optical system (10) configured to project the light beam. The collector (6) is configured so that some of the light rays of the light beam are parallel to the optical axis (8) or have an angle of inclination α smaller than or equal to 25° in a vertical plane with respect to said axis; and the optical system (10) is configured to form an image of the reflective surface (6.2) of the collector (6). The invention also relates to a luminous device comprising one or more such luminous modules.
