Abstract (en)
[origin: WO2019238208A1] The present disclosure relates to a light emitting communication assembly (1), preferably for a vehicle (10), comprising an outer light transmitting and light reflecting layer (2); an inner light emitting layer (3); an inter-space (4) between the outer light transmitting and light reflecting layer (2) and the inner light emitting layer (3); wherein the outer light transmitting and light reflecting layer (2), the inner light emitting layer (3) and the inter-space (4) are arranged and constructed in such a way, that when the inner layer (3) is in a light emitting mode, light emitted by the inner light emitting layer (3) into the inter-space (4) is visible as transmitted light through the outer layer (2); and, when the inner layer (3) is in a not light emitting mode, the outer light transmitting layer (2) appears to be opaque by reflecting light incited on the outer light transmitting and light reflecting layer (2). The present disclosure further relates to a vehicle (10) comprising at least one such light emitting communication assembly (1).
