Abstract (en)

[origin: WO2020025491A1] The invention relates to a condensate recovery device comprising: – a condensate collection tank, – a pump for recovering the condensate received in said tank. According to the invention, the pump is mounted on a first support bearing means for holding and/or guiding the tank or a second support bearing the tank, so that the tank or the second support is translatably and/or rotatably movable with respect to the first support so as to be able to adopt at least two positions: – a working position in which the tank is connected to the pump; – and a draining position in which the tank is disconnected from the pump and moved relative to the first support so as to allow a condensate-draining and/or cleaning operation.
