Abstract (en)

[origin: WO2020025265A1] The invention is directed at a method for determining at least one schedule for a means of transport from a plurality of means of transport, having the steps of receiving at least one input data record; wherein the at least one input data record has user data for at least one user and at least one further piece of information; and determining the at least one schedule for the means of transport from the plurality of means of transport by optimising an optimisation function by taking into consideration the at least one input data record. Further, the invention is directed at a corresponding unit and a computer program product.
