Abstract (en)
[origin: WO2020025890A1] The invention relates to an electrical control device (1), comprising at least one power module (2) which comprises at least one controlled power switch, at least one control card (17) attached to the power module (2), and electrical connection means which connect said control card (17) to said control module, characterised in that the electrical connection means comprise at least one pin (4) which is electrically connected and extends from the power module (2), or, respectively, the control card (17), and at least one receptacle (18) which is electrically connected and mounted on the control card (17), or, respectively, the power module (2), the pin (4) being inserted, at least partially, into the receptacle (18), said pin (4) and the receptacle (18) being designed to provide an electrical connection between them whilst allowing the pin (4) to be removed from said receptacle (18).
