Abstract (en)
[origin: CN112914464A] The present invention relates to a water-conducting household appliance and a method for operating such a water-conducting household appliance. A washing machine has a process chamber, a water guide device guided away from and to the process chamber, a receiver for detergent connected to the water guide device and having a detergent container, a filter device for filtering out fibers in the form of microplastics from the water, and a receiver connectable to the filter device for filtered material from the filter device. The receiver for the filtered substance has a filtered substance container, and the receiver for the detergent is fixedly connected to the receiver for the filtered substance such that they form a structural unit that can be operated independently. Both containers are closed towards the outside.
