Abstract (en)
[origin: WO2020030602A1] The invention relates to a method for producing a wall for a piece of furniture. The method is distinguished by the following steps: providing two panel-form core halves (41a, 41b), of which at least one has at least one aperture (42), which extends only along a portion of a side surface (412) of the core half (41a, 41b); inserting a fitting (30), or a fitting housing, into the at least one aperture (42) and joining together the two core halves (41a, 41b) to form a composite element (40), which encloses the fitting (30), or the fitting housing, wherein the side surfaces (412) of the two core halves (41a, 41b) are located one upon the other; applying a narrow-surface coating (43) to at least one end surface of the composite element (40), said end surface being oriented transversely to the side surface (412); and making an opening (44) in a portion of the at least one end surface, said opening extending as far as the fitting (30), or the fitting housing. The invention also relates to a wall which is produced by such a method and is intended for a basic furniture structure (10), and to a piece of furniture or a basic furniture structure (10) having such a wall.
