Abstract (en)

[origin: WO2020030575A1] The invention relates to a workpiece handling apparatus for handling at least one planar workpiece, which workpiece preferably consists at least in portions of wood, wood-containing material, composite material or plastics material, the workpiece handling device comprising a lifting unit and a gripping unit, the gripping unit being designed to perform a displacement movement in parallel with at least one first direction, and the gripping unit comprising a workpiece holding device that is designed such that the workpiece holding device can become reversibly, frictionally and/or interlockingly connected to at least one planar workpiece, characterised in that the gripping unit is designed such that the workpiece holding device can perform a displacement movement in parallel with a second direction, which is different from the first direction, and the lifting unit comprises at least one guide element that is designed so as to perform a displacement movement in parallel with the second direction and is also designed to restrict at least one degree of freedom of movement of the at least one planar workpiece.
