Abstract (en)

[origin: WO2020030844A1] A binding material winding device (100) for winding binding material (101) from an object tied with said binding material comprises a guiding member (102) and a winding member (104). The binding material (101) is e.g. a strap, wire or string. The guiding member (102) is arranged to be introduced with the binding material (101) and configured to guide said binding material towards said winding member (104). The winding member (104) is configured to be introduced with said binding material (101) during actuation of said winding member and thereby wind and remove said binding material (101) via said actuation.
