Abstract (en)

[origin: WO2020030520A1] The invention relates to a vehicle crane system (1) comprising a vehicle crane (2) with an attachment part (7), in particular a bracing device, which can be mounted on and removed from the telescopic jib (3) of the vehicle crane, and to an attachment part transporting unit (5), designed for transporting the attachment part (7), for an attachment part (7) of a telescopic jib (3) of a vehicle crane (2). According to the invention, to make transporting and moving the attachment part (7) more economical and practicable overall, a mobile transporting device (6) is provided, which is designed for transporting the attachment part (7) and has at least one loading arm (13), the free supporting end (15) of which can be coupled to the attachment part (7) carried or to be carried on the transporting device (6). The loading arm (13) is arranged movably on the transporting device (6) such that the attachment part (7) can be moved between the transporting device (6) and the telescopic jib (3). Furthermore, the transporting device (6) has a tilting device (9) which is designed for raising and lowering one side of the attachment part (7) carried or to be carried on the transporting device (6).
