Abstract (en)

[origin: WO2020030538A1] The present invention relates to a method for producing an organooxysilyl-crosslinked polymer consisting of reacting a polyether carbonate polyol containing carbon-carbon double bonds with a polysiloxane compound in the presence of a catalyst (A), wherein the polysiloxane compound has at least two Si-H bonds. The invention further relates to organooxysilyl-crosslinked polymers obtainable by the claimed method.
